

An environment is the natural world which surrounds the earth and makes a particular geographical area in which human beings animals,plants and other living and nonliving things exist.

A clean environment is very necessary to live a peaceful life and healthy life.But other environment is getting dirty day by day because of some negligence of human beings.It is an issue which everyone must know about especially our next generation.

We live in the most beautiful planet,Earth which has very clean and attractive nature full of greenery.Nature is our best friend which provides us all the resources to live here.It gives us water to drink,pure air to breathe,food to eat,land to stay,plants for our other uses,etc for our betterment.We should fully enjoy the nature without disturbing its ecological balance.We should care our nature,make it peaceful, keep it clean and prevent it from the destruction so that we can enjoy our nature forever .Nature is a most precious gift given by the god to us to enjoy but not to harm

mining manufacturing and other human activities, whether they accumulate or disperse, will degrade the environment. In the hierarchy of controls, pollution prevention and waste minimization are more desirable than pollution control. In the field of land development, low impact development is a similar technique for the prevention of urban runoff. Following are the main causes of pollution:

**Industrial activities:** The industries all over the world that brought prosperity and affluence, made inroads in the biosphere and disturbed the ecological balances. The pall of smoke, the swirling gases, industrial effluents and the fall out of scientific experiments became constant health hazards, polluting and contaminating both air and water. The improper disposal of industrial wastes are the sources of soil and water pollution. Chemical waste resulting from industry can pollute lakes, rivers and seas and soil too as well as releasing fumes.

**\*Dumping solid waste:** Household and commercial waste pollutes the environment when not disposed of properly.

## Effect

Environmental pollution has negatively affected the life of both human beings and animals. Almost all of our gains in the fields of industrial progress, science and technology had so far been realized at the cost of our health. Even our flora and fauna were found to be threatened with extinction.

## Solution

There surely cannot be any radical solution for the existing factories cannot be bodily lifted to place far from the polluted zone. However the following attempts can be made to solve the problem of environmental pollution.

\*The government can at least see that future factories are set up a distant place, an industrial complex far away from the township.

\*Researcher may find out how to avoid harmful smoke from running vehicles.

\*Deforestation should be stopped and forestry should be developed.

\*Discharge of factory wastes in rivers should be banned so as to make the river water free from the pollution.

oxygen. According to international standards, area under forests should form at least 25 percent of the total land inhabited by a human population.

we can very well notice the abnormal behaviour of the seasons the cycle developing clogs in its wheels ;and the worried experts fear that disturbed balance in the biosphere has assumed such serious proportion that very soon our world would be uninhabitable like Hiroshima of 1945. But it is heartening to find the entire world aware of the menace. Some of the advanced countries has also taken many measures. The government of assam gas also taken many measures. As a citizen of this state and this country it is our responsibility to do our duties which are helpful to protect the environment..so not only me we want to see a green ASSAM....and my slogan in this respect is

**"BLISS AND PEACE RESTS IN TREES  
CURSED IS HE,WHO KNOWS NOT THIS"**
